PUTTING THE MOUTH BACK IN THE BODY

BADT NATIONAL CONFERENCE 2017

Fazeley Studios, Birmingham
9th - 10th June 2017
We are looking forward to welcoming you to our second boutique-style conference in Birmingham in the heart of England. This year’s conference supports the Office of the Chief Dental Officer for England’s mandate of ‘Putting the mouth back in the body’. This follows the Five Year Forward View’s approach of greater integration across all NHS healthcare professionals. We will be bringing together a variety of speakers and topics which explore the oral and medical impact of diet, caries, age related and systemic conditions on the body.

The successful Saturday hands-on workshop programme will operate once again with options of the Hall Technique and Clinical management of the deep carious lesion.

We look forward to seeing you in Birmingham, places are limited so please book early to avoid disappointment and missing out on 8 hours verifiable CPD.

Non-members from the whole spectrum of dental, pharmacy and medical teams are very welcome.

Amanda Gallie
BADT President

   Fiona Sandom, Dental Therapist
13:00  Close and lunch
Saturday 10th June 2017 - Hands-on workshop sessions

1. **Management of the deep carious lesion** - Sara Hughes, Optident

   **Aims:**
   - Biological changes within the pulp-dentine complex in carious teeth including the caries progression process
   - Current concepts within operative dentistry including cavity design and preparation, direct and indirect pulp capping and an overview of restorative materials resulting in best outcome
   - Practical aspects of managing the deep carious lesion through a hands on session using a range of different restorative materials

   **Learning outcomes:**
   - How biological pulp changes in carious teeth influence operative management
   - Available restorative materials to manage deep carious lesions
   - Current concepts within operative dentistry applicable to day to day clinical situations

2. **Stainless steel crowns, the Hall Technique** - Fiona Sandom, Dental Therapist

   **Aims:**
   - To give a practical approach to patient selection and providing stainless steel crowns using the Hall Technique

   **Learning Outcomes:**
   - Understand the benefit of using this technique for restoring deciduous molar teeth
   - Be able to select suitable patients that can be treated with the Hall Technique
   - Understand how to prepare for the placement of the crown
   - Be able to select the correct crown and place the crown correctly
   - Be able to give correct post operative advice
